

Massachusetts Wage Gap

In recent decades, The Commonwealth of Massachusetts has made significant strides towards achieving intersectional gender equality.

New Pay Equity Law

August 2016 marked the signing of historic equal pay legislation, giving Massachusetts one of the most expansive pay equity laws in the country. Beginning in July 2018, employers in Massachusetts will no longer be allowed to ask employees about salary history, the first ban of its kind in the United States.¹ The new law simultaneously promotes salary transparency, incentivizes internal audits for wage gaps, and requires equal pay for comparable work. The legislation passed in Massachusetts, which has been in the pipeline for almost 20 years, has become a model nationwide.²

According to the Census Bureau's 2016 American Community Survey, the median annual earnings for full-time, year-round male workers in Massachusetts are \$62,868 while the median earnings for women are \$51,666.³ The average woman in Massachusetts makes 82 cents for every dollar earned by a male counterpart. Despite the robust pay equity legislation passed in August 2016, the wage gap still persists and is not predicted to close in our state until 2058.⁴

How do other facets of identity impact the wage gap?

Race/ethnicity

The pay ratio is even more extreme for Massachusetts women of non-white races and ethnicities. Asian women make 81 cents on the dollar, Native women make 61 cents on the dollar, African-American women make 61 cents on the dollar, and Latina women make 52 cents on the dollar.⁵ In 2018, we will observe the following dates in recognition of the gender wage gap.

February 22nd – Asian Women's Equal Pay Day
April 10th – Women's Equal Pay Day
August 7th – African American Women's Equal Pay Day
September 27th – Native Women's Equal Pay Day
November 1st – Latina Women's Equal Pay Day

Age

Nationally, young women between the ages of 20-24 who work year-round, full time earn approximately 96 cents for every dollar a man makes.⁶ Women ages 25 to 54 earn 78 to 89 cents on the dollar while women ages 55-64 who work full time, year round make approximately 74 cents for every dollar earned by a male counterpart.⁷ Working women ages 65 and over earn a mere 67 cents on the dollar.

Education

Women, regardless of educational attainment, face a wage gap compared to male peers who possess the same level of education. For example, women in Massachusetts with graduate or professional degrees have median earnings of \$63,911 while their male counterparts have median earnings of \$93,146.⁸ This is a wage gap of 31 percent. For women with college degrees, there is a wage gap of 31 percent. For those women with some college education or an associate's degree, there is a wage gap of 30 percent. Most glaringly, women in Massachusetts who have graduated from high school face a wage gap of 36 percent. Finally, for women who have not completed a high school education, there is a wage gap of 32 percent.

Massachusetts Wage Gap

Motherhood Penalty

On average, mothers earn less than childless women. In the U.S., Women lose roughly 7 percent of their salaries per child while men who become fathers generally see an increase in their salaries, known as the fatherhood bonus.⁹ Mothers in Massachusetts make 71 cents for every dollar earned by fathers.¹⁰ Additionally, employers are more likely to hire childless women when compared to mothers, even mothers who did not leave the workforce.¹¹

Sexual orientation

Gay and bisexual men are usually paid anywhere between 10 and 32 percent less than similarly qualified heterosexual counterparts while lesbian women make less than all men, regardless of sexual orientation.^{12 13}

Gender identity

Nationally, average earnings decrease by roughly one third for workers who undergo transitions to female.¹⁴

Occupational Segregation

While there is a gender wage gap across almost all industries and occupations, women are also more likely to work in “pink-collar” jobs, which have historically offered lower salaries. Jobs traditionally occupied by men typically have higher median salaries than jobs traditionally occupied by women, even when both jobs require the same level of skill or education.¹⁵
